

Computational Law Approach to Competition Impact Assessment

Emerson S. Bañez

October 10, 2024

Outline

- 1 Competition Impact Assessments
- 2 Computational Law
- 3 Law and Logic
- 4 Steps - Ontology Design
- 5 Analysis Preview

Competition Impact Assessments

- Givens:
 - ▶ More competition is better
 - ▶ Law can shape the competitive environment
- Therefore:
 - ▶ Review laws for competition effects (-)
 - ▶ Amend those laws to enable more competition.

Competition Impact Assessments

- BUT: Growing Search Space
 - ▶ Statutes
 - ▶ Regulations
 - ▶ Decisions
 - ▶ Direct and indirect subject matter
 - ▶ Add up depending on the economic sector

Competition Impact Assessments

1 IDENTIFY
policies to assess

2 APPLY
Checklist

Any competition distortion?
YES **NO**

*run in-depth assessment
of restriction*

3 IDENTIFY
alternative options

4 COMPARE
alternatives to status quo

Which is the best option?
STATUS QUO **ALTERNATIVE**

5 IMPLEMENT
best option

CONDUCT **6**
ex-post assessment

Competition Impact Assessments

COMPETITION ASSESSMENT CHECKLIST

Competition assessment should be conducted if a legal provision has any of the following effects:

A

Limits the number or range of suppliers

This is likely to be the case if the provision:

- A1** Grants exclusive rights for a supplier to provide goods or services
- A2** Establishes a license, permit or authorisation process as a requirement of operation
- A3** Limits the ability of some suppliers to provide goods or services
- A4** Significantly raises cost of entry or exit by a supplier
- A5** Creates a geographical barrier for companies to supply goods,

B

Limits the ability of suppliers to compete

This is likely to be the case if the provision:

- B1** Limits sellers' ability to set prices for goods or services
- B2** Limits freedom of suppliers to advertise or market their goods or services
- B3** Sets standards for product quality that provide an advantage to some suppliers over others, or are above the level that some well-informed customers would choose
- B4** Significantly raises costs of production for some suppliers relative to others (especially by

Gap in Scholarship

A CONVERGENCE OF TWO GAPS

Chapter Plan

Computational Law

- “Law that works like software”
- Steps:
 - ▶ Encode the law into computational structures
 - ▶ For automated analysis and evaluation → Legal Determination

Why Computational Law?

- Law - Reason over Power
- Universality in Computation
- Higher Towers of Consequences

Limits of Legal Reasoning

Figure: Beauvais Cathedral, Interior

Example applications

Figure:

Example applications

Figure: Autonomous Systems

Distinction from functional code

- Encode and analyze legal rules “as such”
- Easier to update separately when the law changes

Example applications

- Determine possible legal outcomes
- Making plans, giving advice
- Identifying lines of argumentation
- Drafting of legal documents

Scope of Computational Law

- Some laws more amenable to computability
- Does not mean giving up on decision-making

Some Laws More Amenable

- YES: Tax Law, Commercial Law, Contracts
- NO: Criminal Law, Constitutional Law
- ???: Case Law

Not a Substitute to Human Decision-making

- Determines “what follows” from premises
- Confirmation, prediction, generation of arguments

Choice of Models

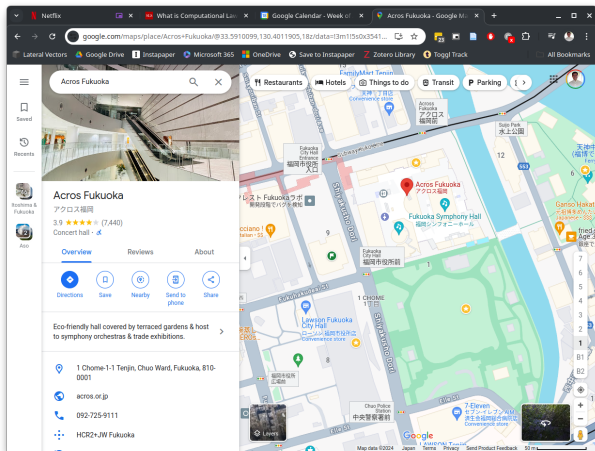

Figure: “All models are wrong, but some are useful - George Box”

Choice of Models

British Nationality Act 1981:

“A person born in the United Kingdom after commencement shall be a British citizen if at the time of birth his father or mother is
(a) a British citizen; or...”

Extended Horn Clause:

x becomes a British citizen

if x was born in the United Kingdom on date y

and date y is on or after commencement

and x has a parent z and z is a British citizen

Choice of Models

Problem	Encoding	Analysis
<p>Relevance Testing:</p> <p>Does the law map with the industry being assessed? (Actors, transactions)</p>	<p>Value chain analysis → Ontologies (Ontology Web Language)</p>	<p>Reasoning engines to determine relationships:</p> <ul style="list-style-type: none">- No mapping?- Identity?- Classification?- Mereological?
<p>Threshold Testing:</p> <p>Given a specific rule within a relevant law - How does this rule relate to the norm of the threshold test?</p>	<p>Inference rules (Prakken, Sartor) - LegalRuleML</p>	<p>Argumentation Frameworks (?)</p> <p>Propositional networks (?)</p>

Computational Law

Text	Deontic Logic Version	Ontology
<p>A1 - Grants exclusive rights for a supplier to provide goods or services</p>	<p>If it is <i>permitted</i> to supply goods, AND it is <i>obligatory</i> that the supplier = 1 THEN</p> $(P(\text{Supply Goods}) \wedge (O(\text{Supplier}=1))) \rightarrow$ <p>(0 - No effect; 1 - Indirect Effect; 2 - Direct effect)</p>	 <p>The ontology diagram illustrates a network of entities and their relationships. Key entities include 'State', 'Juridical Entity', 'Supplier', 'National Product', 'Cooperation', 'Contract', 'Benefit', 'Market', and 'Supplier'. Relationships are shown as directed edges, with some labeled 'Member of' and others as unlabeled arrows. A central node 'Supplier' is connected to 'Juridical Entity' and 'National Product'. 'Juridical Entity' is connected to 'State'. 'National Product' is connected to 'Supplier'. 'Supplier' is connected to 'Cooperation', 'Contract', and 'Benefit'. 'Contract' and 'Benefit' are connected to 'Market'. 'Supplier' is also connected to 'Market'. A 'Supplier' node is also connected to 'Market' via a 'Supplier' label. A 'Supplier' node is also connected to 'Market' via a 'Supplier' label. A 'Supplier' node is also connected to 'Market' via a 'Supplier' label.</p>

Law and Logic

“The life of the law has not been logic; it has been
experience.”
Oliver Wendell Holmes, Jr.

Law and Logic

- Historical arguments
- Epistemological arguments
- Practical arguments

Threshold Test

A. Limits the number or range of suppliers

A1 - Grants exclusive rights for a supplier to provide goods or services

Step 1 - Determine domain and scope

COMPETITION ASSESSMENT CHECKLIST

Competition assessment should be conducted if a legal provision has any of the following effects:

A

Limits the number or range of suppliers

This is likely to be the case if the provision:

- A1** Grants exclusive rights for a supplier to provide goods or services
- A2** Establishes a license, permit or authorisation process as a requirement of operation
- A3** Limits the ability of some suppliers to provide goods or services
- A4** Significantly raises cost of entry or exit by a supplier
- A5** Creates a geographical barrier for companies to supply goods,

B

Limits the ability of suppliers to compete

This is likely to be the case if the provision:

- B1** Limits sellers' ability to set prices for goods or services
- B2** Limits freedom of suppliers to advertise or market their goods or services
- B3** Sets standards for product quality that provide an advantage to some suppliers over others, or are above the level that some well-informed customers would choose
- B4** Significantly raises costs of production for some suppliers relative to others (especially by

Step 2 - Consider existing ontologies

- Concepts and relationships in the OECD Guidelines
 - LegalRuleML for concepts related to law
- Concepts and relationships in the digital payments sector - Subset of the Financial Industry Business Ontology

Step 3 - Enumerate Important Terms

Nouns	Verbs/Adjectives
Right	limit
Supplier	number
Goods	range
Services	grant
(State)	provides
(Law)	exclusive

Step 4 - Design Class Hierarchy

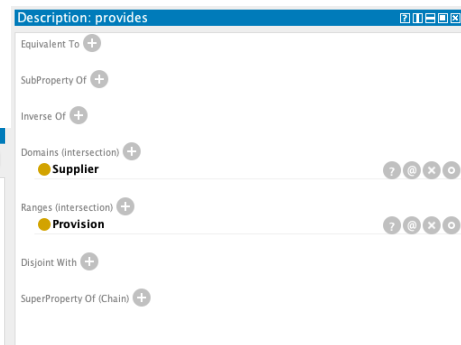

Class hierarchy: owl:Thing

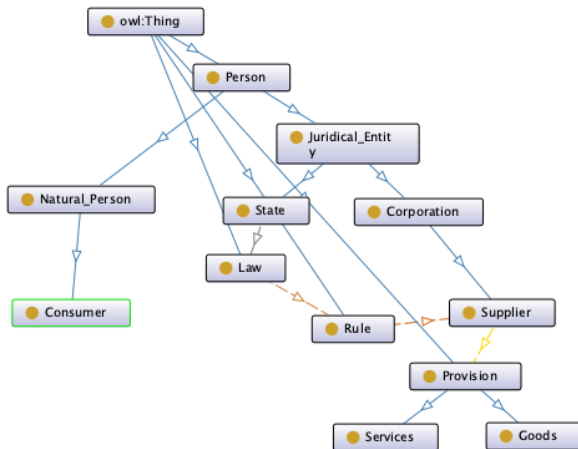

Asserted

Step 5 - Design Internal Structure of Classes

Step 6 - Define Attribute Restrictions

Analysis Preview

Demo: Constraints and Inferences - Who is an Aunt or Uncle?

Analysis Preview

Demo: Querying Facts

Beware

- Thin, Formulaic Simplifications
- Imposed, not negotiated
- Utilitarian, commercial, fiscal
- Monocultural, geometric

Mētis

- Practical, Localized Knowledge
- Experience, Intuition, Improvisation
- “Messier”

“Messy Pathways”

Next Steps

- Document assumptions and constraints
- Ontology as data structure (Python)
- Encoding the deontic logic - as ontological rules

End

Thank You!
